

## **NOTICE FOR SUPPORT FOR THE DIGITAL TRANSITION OF ENTERPRISES**

### **ACTION 1.2.3 PR ERDF 2021-2027**

#### **DIGITAL INTEGRATION OF DATA AND PROCESSES AT INDUSTRIA MOLITORIA DENTI**

Industria Molitoria Denti has made a major investment in a new management system that enables a 4.0 transformation and a new level of digital integration of data and in-house and supply chain processes.

The opportunity provided by the ERP to digitally integrate communication and operational flows, allows production to be simplified and decision-making processes to be facilitated.

Horizontal integration now allows machines, devices and programming processes to align production scheduling. Vertical integration allows production data to be used to optimise organisational, administrative and commercial flows.

The new system also involves the management of the company's value chain, both with respect to the sales network in the territory, which will have devices and applications at its disposal to ensure constant interchange of data (orders, availability, production times, etc.) and with respect to the various supply chain stakeholders (warehouses, mills, agents, etc.) to facilitate analyses preparatory to strategic and operational decision-making processes.
